

WA-II-276

Bakersville Survey District

Bakersville Road, Boonsboro (legal town designation), Maryland

1823-1900

Private

Bakersville is a small crossroads village located in southwestern Washington County, approximately five miles northwest of Sharpsburg, near the intersection of Bakersville (Route 63) and Fairplay Roads. The survey district is .25 miles long and consists of 6 contributing and 2 noncontributing resources, all of which are located along the north side of Bakersville Road. A former church/school and one brick dwelling date to the second quarter of the 19th century. The present church was erected in 1854, and three frame houses were constructed during the fourth quarter of the 19th century. The district's 2 noncontributing resources date to the later part of the 20th century. The surrounding rural landscape is typified by large farms, rolling fields and woodlands, occasionally punctuated by modern residential construction.

Bakersville is an example of the type of small cross roads, rural postal village that developed in the second quarter of the 19th century to meet the needs of area farm families. It is named for Elias Baker, Sr. (1785-1863) who was Bakersville's first postmaster and the owner of the store around which the tiny hamlet developed. The village's small collection of buildings include two interesting antebellum vernacular buildings, as well as a church and three postbellum houses whose designs were inspired by nationally popular building styles.

Summary Description

Bakersville is a small crossroads village located in southwestern Washington County, approximately five miles northwest of Sharpsburg, near the intersection of Bakersville (Route 63) and Fairplay Roads. The survey district is .25 miles long and consists of 6 contributing and 2 noncontributing resources, all of which are located along the north side of Bakersville Road. A former church/school and one brick dwelling date to the second quarter of the 19th century. The present church was erected in 1854 and three of the district's frame houses were constructed during the fourth quarter of the 19th century. The district's 2 noncontributing resources date to the later part of the 20th century. The surrounding rural landscape is typified by large farms, rolling fields and woodlands, occasionally punctuated by modern residential construction.

Physical Description

Bakersville is more accurately described as a small collection of houses rather than a community. While its size is much the same as it was a century ago, the village's sense of place was supported by the combined presence of a church, school, general store, post office and long-established families living in close proximity. The school, store and post office have closed and many old families have moved away, leaving only the Salem Evangelical Lutheran Church as the sustainer of community. Bakersville's identity has diminished to the point that its location is sometimes omitted from road maps, and the official town address of its residents is listed as Boonsboro.

The survey area consists of 6 contributing and 2 noncontributing resources. District architecture is not easily characterized due to the varying condition, age and small number of resources. The present and former church buildings and one 19th-century frame house are in either good or excellent condition. Three late-19th-century dwellings are in a fair but deteriorating state of repair. One mid-20th-century house is also rather dilapidated, while the district's other 20th-century dwelling appears well-maintained. Historic buildings are constructed almost immediately adjacent to the road, while the two modern houses are setback approximately 50 feet.

The former Union Church and present Salem Evangelical Lutheran Church are the district's oldest resources. The first is a vacant but well-preserved limestone edifice built in 1823 to serve as a church for Bakersville's three dominant religious denominations. It shares a lot with the current Salem Evangelical Lutheran Church. Built in 1854 and modified in 1888, this attractive and well-maintained brick building is surrounded by a large cemetery containing hundreds of graves. Nicely crafted, hand-carved stones mark the location of the earliest graves. The oldest legible stones dating to the second decade of the 19th century.

Slightly more than one-tenth of a mile of farm fields, woodlands and limestone outcrops separate the church buildings and cemetery from the small collection of houses that forms Bakersville's core. These dwellings are located on the north side of Bakersville Road, west of its intersection with Fairplay Road. All face south towards the cultivated fields associated with the former George Stonebraker Farm, identified in the Maryland Inventory of Historic Properties as "Three Part House" (WA-II-413).

Surrounded by mature trees, the stone and brick Stonebraker house is partially visible in the distance. It is set back from the public right-of-way and oriented towards Fairplay Road. The oldest section probably pre-dates Bakersville.¹ It is not included in the survey due to the fact that it is a large farm complex oriented away from the village with no direct commercial or family associations with either Bakersville or the Baker family.

The Eakle Farm is located immediately north of the survey area and is accessed by a private farm lane that extends from the west side of Fairplay Road. It is listed on the Maryland Inventory of Historic Properties as "Wooden Farmstead" (WA-II-0454). The house is vacant but the 110 acre farm remains in cultivation. The farm is excluded from the survey area due to its function, location and lack of direct association with Bakersville's development or the Baker family.

Bakersville's oldest domestic building is at **17542 & 17544** Bakersville Road. This plain, four-bay, brick building was constructed c. 1827 by Elias Baker, Sr. for whom the village was named. Constructed for combined use as a house and store, the building now serves as a duplex. Immediately left (west) are **17536** and **17532** Bakersville Road. Both of these frame I-houses built in the late-19th century on land formerly owned by the Baker family. The building that stood at **17534** Bakersville Road has been demolished. Continuing west, the next two adjacent lots are occupied by the modern frame split level house at **17528** Bakersville Road and the 19th century gable-front-and-wing dwelling at **17524** Bakersville Road.

Prepare a one-paragraph summary statement of significance addressing applicable criteria, followed by a narrative discussion of the history of the resource and its context. (For compliance projects, complete evaluation on a DOE Form – see manual.)

Statement of Significance

Bakersville represents the type of small cross roads, rural postal village that developed in Washington County in the second quarter of the 19th century to meet the needs of area farm families. It is named for Elias Baker, Sr. (1785-1863) who was Bakersville's first postmaster and the owner of the store around which the tiny hamlet developed. Its small collection of buildings include two interesting antebellum vernacular buildings, as well as a church and three postbellum houses whose designs were inspired by nationally popular building styles.

Period of Significance

The Period of Significance is 1823-1900. The first date is associated with the construction of the Union Church, which is Bakersville's oldest surviving building. By 1900 all of Bakersville's historic resources were standing, and the store around which the village developed had closed.

History and Context

Bakersville developed as a small cross roads village in the second quarter of the 19th century. It is named for Elias Baker, Sr. who built a house and store near the intersection of present-day Bakersville and Fairplay Roads about 1827. Baker was appointed as the village's first post master in 1833. After Baker's death in 1863, store and postal operations passed to Baker's son-in-law, Isaac Wilson. Even at its height, Bakersville consisted of no more than 7 or 8 houses, one or two stores, a school and church. General economic conditions, combined with the opening of the Shenandoah Valley Railroad in 1882 and the advent of the automobile, are principal factors leading to its decline in the late-19th and early 20th centuries.

Bakersville is located in southern Washington County on land associated with *Chew's Farm*, which was a 5000-acre tract patented in 1734 by Samuel Chew of Anne Arundel County.² While Washington County's first land patents date to the 1730s, most were claimed by investors from eastern Maryland who, like Chew, had little or no intention of moving to these lands, but instead hoped to profit from future land rents or resale. The Stonebreakers, Eakles, Davises and Poffenbergers acquired large tracts of land in the third quarter of the eighteenth century and were among the future Bakersville area's earliest residents. Despite their later prominence, the Bakers did not purchase land in the area until the second decade of the 19th century.³

The area, like all of that which became Washington County, developed slowly. Early attempts at concentrated settlement were undermined by hostile Indians and remained largely unsuccessful until the conclusion of the French and Indian War in 1763. With the cessation of hostilities immigration quickly resumed, nascent settlements were reestablished and new communities formed. By 1776 the population was sufficient to warrant the creation of Washington County.⁴

Early settlers pressed into Washington County attracted by the availability of fertile land. Some of these new farms were established by English or Scotch Irish settlers from the Chesapeake area, but many were associated with immigrating Germans moving out of Pennsylvania.⁵ German immigrant John Hager's 1762 town of Elizabethtown (now Hagerstown) emerged as the largest population center west of Frederick. Other early communities include Sharpsburg and Williamsport, both of which are located only about five miles from Bakersville.

The establishment and growth of villages and towns largely coincided with access to the growing network of roads and turnpikes. Population centers developed as local market centers principally catering to the needs of the surrounding farm community. Bakersville's development in the second quarter of the 19th century appears consistent with this typical pattern. The little village emerged at the intersection of the c. 1737 road from Williamsport and a smaller road that travelled south towards Sharpsburg. A half-mile east of this intersection was the c. 1739 forerunner to Sharpsburg Pike (Route 65), which served as the main north-south route connecting Hagerstown with Sharpsburg.⁶

Town development coincided with the region's growing prosperity which in turn derived from a robust grain-based agricultural economy. Wheat was by far Washington County's most important cash crop. Grain was more easily transported when milled into flour and so by extension, grain mills also flourished along the county's myriad creeks and streams. In the 18th and 19th centuries numerous mills were located near Bakersville along Marsh Run and Antietam Creek (Figure 1).⁷

Bakersville's history is not well documented. Except for entries about the church, little about Bakersville appears in either of the county's two published histories. Thomas Williams' account related to the construction of the first church in c. 1800 remains the best source of information on the region's early history. He writes "*There being but few families [in Bakersville], though they were of different faiths, principally Methodists, German Reformed and Lutherans, they came together at a point in the edge of a clearing, and here these sturdy God-fearing people built a log church...The first Lutherans were Germans and therefore conducted the services in German.*"⁸ The location of the church appears on Charles Varle's 1808 map of Washington County (Figure 1).⁹

Williams' report is interesting for several reasons. First it indicates that the area was sparsely populated, but religiously and ethnically diverse. Second, the construction of one shared house of worship reflects good relations and a spirit of cooperation among these persons of different backgrounds. Third, it suggests a population lacking the sufficient resources needed to construct separate houses of worship. The use of log construction is also notable in that it is consistent with what is known about the nature of the region's early architecture. In the 18th and early-19th century, log construction was the overwhelmingly dominant building method for all but the best buildings.¹⁰ If this important joint symbol of community and faith was built of logs, it suggests that the congregant's homes also utilized inexpensive log construction.

The region's population and prosperity grew, and in 1823 the simple log church was replaced with a plain, but well-constructed, 40'x 50' stone building. Again, this represented a joint effort by the area's three principal denominations. The agreement between the Methodist Episcopal, German Reformed, and Evangelical Lutheran congregations was legalized in 1835 with the execution of Articles of Incorporation under the name "Union Church."¹¹ The second church's list of patrons included both Anglo and Germanic names. Among them were Peter Palmer, Henry Poffenberger, Martin Newman, John Bratner, John Knode, Henry Zook, William Reynolds, Joseph Roberts, Jacob Dovenberger and Otho Baker.¹² The now-vacant Union Church building, located at 17626 Bakersville Road, is the district's oldest surviving architectural resource.

In 1827 Elias Baker, Sr. (1785-1863), the son of church patron, Otho Baker, acquired a .08-acre lot of land on the east side of "*the wagon road leading to Williams Port... being part of a tract of land called Chews Farm*" near the intersection of present-day Bakersville and Fairplay Roads. Ten years earlier Baker purchased an adjacent lot from Owen Robey, but that sale was later invalidated due to a challenge from Daniel Rentch who declared he was the rightful owner and that Robey acted illegally when he sold

Maryland Historical Trust

Maryland Inventory of Historic Properties Form

Inventory No. WA-II-276

Name
Continuation Sheet

Number 8 Page 2

the land to Baker. Baker agreed to relinquish the original lot in exchange for an adjacent or nearby parcel of the same size.¹³ Soon after this transaction, Baker erected a 2 1/2-story, Flemish bond brick building for use as a home and store. Elias Baker's house is located at **17542 Bakersville Road** and is the survey district's second oldest building.

Elias Baker's business appears to have been successful and involved more than the sale of dry goods. Land records from the 1820s and 30s record more than a dozen bills of sale for household goods and farm animals. In numerous cases Baker purchased the entire contents of a house, though not the land or buildings. The quantity of windsor chairs, dining tables, 10 plate stoves and bedsteads is far beyond what he would need for personal use and indicates acquisition for purposes of resale.

Baker was also a minor financier. His wealth or access to capital was sufficient enough to enable him to make loans of several hundred dollars. On at least five occasions he loaned money, taking as collateral the borrower's land and/or slaves. By the late 1830s loans were occasionally carried out in partnership with John Van Swearingen, while his purchases of household goods were sometimes done in conjunction with his son, Elias Baker, Jr.¹⁴

Baker's reason for establishing his home and business at this location was most likely the cross roads location and proximity to the Potomac River. Construction of the Chesapeake & Ohio Canal was about to start. After numerous delays the canal finally opened in Washington County in 1833. Its arrival precipitated immediate growth along the its route. Factories and mills opened along the Potomac and the population grew as both skilled workers and manual laborers moved to the area seeking employment. The same year the canal opened at Harper's Ferry, Elias Baker, Sr. was appointed as Bakersville's first postmaster.¹⁵ While the canal was convenient for area farmers, millers and merchants, there is no evidence of a direct impact on Bakersville's development.

The format of census records make it difficult to determine how many persons resided within the village as opposed to the surrounding area, but it is clear from the small number of non-farm occupations that in 1850 Bakersville remained a tiny hamlet. This characterization is also consistent with Thomas Taggart's depiction of Bakersville on his 1859 map of Washington County.¹⁶ In the 1850 census Elias Baker is listed as a merchant and his son, Charles Baker, as a carpenter. Elias' neighbor and son-in-law, Isaac Wilson (1824-1891), was employed as a clerk, presumably in Baker's store. Baker's other immediate neighbors included two shoemakers, one weaver and a tailor. Elias' son, Otho Baker, was a boat builder and lived near the canal.¹⁷

In 1854 construction started on Bakersville's third church. Unlike two previous houses of worship that were jointly owned and used by three denominations, the new brick edifice was built for the exclusive use of the Lutheran congregation and named the Salem Evangelical Lutheran Church. After the completion of the new church the stone Union Church was used as a school.¹⁸

The 1860 census identifies Elias Baker, now 75 years of age, as a farmer, which is curious given that there is nothing to suggest he ever worked in that capacity before. His son, Josiah, and son-in-law, Isaac Wilson, are listed as merchants. In 1860 the Bakersville area was home to two school teachers, four shoemakers, as well as a blacksmith, cooper, tailor and a weaver.¹⁹ Again, given the nature of census records, it is not possible to determine where these manufacturing activities took place. If they were located in Bakersville, no evidence of their operations remain.

As with the rest of the nation, Bakersville's prosperity came to an abrupt halt when civil war broke out in 1861. Washington County's role in the Civil War is important and well documented. The county was the site of numerous battles, small skirmishes, and troop movements during the four-year conflict. The most famous and bloodiest action occurred only a few miles south of Bakersville at the Battle of Antietam where, on September 17, 1862, 23,000 soldiers fell. Troops occupied Bakersville both before and after the battle.²⁰ According to local tradition General William B. Franklin used the Salem Evangelical Lutheran Church as his headquarters. Published sources record that Union surgeon Chapman Davis used the church, school and an unidentified barn as field hospitals from September 19th through November 13, 1862.²¹

Maryland Inventory of Historic Properties Form

Inventory No. WA-II-276

Name

Continuation Sheet

Number 8 Page 3

These are the only buildings whose use is documented, but it is almost certain that wounded were treated in most every home and barn throughout the area. A newspaper clipping from the *Herald of Freedom and Torch Light* that ran in the Baltimore Sun on September 26, 1862 noted that "*from Hagerstown to the southern limits of the county, wounded and dying soldiers are to be found in every neighborhood and in nearly every house...nearly the whole population is engaged in waiting on and ministering to their wants.*" Another piece from the same day reported that the region had been "*eaten out of food of every description*" and that "*the two armies of from eight to a hundred thousand each have swept over it and devoured everything within reach.*"²²

The entire area endured the economic hardship associated with the collateral damage that comes from being the theater of war, but given their proximity to the field of battle, Bakersville's residents experienced these unfortunate events to an even greater extent than more distant locations. The effect of damaged buildings, destroyed crops, depleted timber, commandeered supplies and livestock, as well as injuries and loss of life sustained by area participants, was felt well after Lee's surrender at Appomattox.²³

Elias Baker, Sr. did not live to see the war's conclusion. He died intestate in 1863. Three years later the Equity Court ordered his property sold and the proceeds divided among his heirs. The sale took place on February 28, 1867. Documents related to the sale describe the property as "*1 1/2 acres of land in the village of Bakersville improved by a two story brick house with a store there in and also a log dwelling house.*" Otho Baker clarified that in addition to the two houses, the property also contained a vacant lot. Otho's brother-in-law, Isaac Wilson, was the highest bidder and acquired the property for \$4,920.²⁴ Wilson, who had worked as a clerk for Baker, took over store and post office operations.

The 1877 Lake, Griffing and Stevens Atlas' depiction of Bakersville shows a village of about the same size as that presented by Thomas Taggart nearly twenty years earlier (Figures 2 and 3). This source associates Isaac Wilson with a store/post office, as well as three additional buildings. The later were built on property formerly owned by Elias Baker, Sr. but were not standing at the time of the 1867 Equity Court Decision. Three of Wilson's four buildings survive. These are the original c. 1827 Elias Baker house/store/post office at **17542 & 17544** Bakersville Road, and the two neighboring I-Houses now located at **17536** and **17532** Bakersville Road. The fourth building, formerly located at **17534** Bakersville Road, has been demolished. Census listings indicate Dr. Richard Duckett occupied **17532** and Isaac Wilson's son, Charles, lived in one of the others dwellings. It is not known if Isaac Wilson chose to live in one of the recently constructed buildings or remained in the brick house.²⁵

The Atlas's patron list features six Bakersville residents. In addition to Isaac Wilson, the small list includes three entries for "boatman", which is a canal-related occupation.²⁶ The list is also informative for showing in microcosm broader changes in regional agricultural practice. The patron list includes numerous entries for "dairyman," "fruit and vegetable gardener" and "nurseryman."²⁷ A decade earlier the Baltimore and Ohio Railroad extended its route through southern Washington County. The railroad created jobs and inspired growth but it also upset the traditional farm economy. Throughout the east farm income fell as prices for wheat, Washington County's traditional staple crop, declined as east-bound trains flooded markets with mid-western grain. In response, many Washington County farmers transitioned away from grain to dairy products and fresh fruit and vegetables. Prior to the railroad, these commodities were of little market importance as they were too perishable to transport over a long distance distances. Rail access and improved refrigerated box cars now made dairy and produce viable alternatives to grain.²⁸

The Washington Branch of the Baltimore and Ohio Railroad ran east of Bakersville, through Pleasant Valley and did not have a direct effect on the community. In 1882, however, the newly established Shenandoah Valley Railroad began running trains between Hagerstown and Roanoke, Virginia. The line bypassed Bakersville but included a stop at Grimes Station, which was located 1.5 miles west of Bakersville. Grimes Station, which up to this time had not appeared on maps, was smaller than Bakersville, but the presence of a railroad station gave it distinct advantage over its neighbor.

Number 8 Page 4

Isaac Wilson died in 1891. Charles Wilson subdivided his father's property into four parcels. In 1897 he sold **17532** Bakersville Road to Dr. Duckett's daughter, Ann Louisa Duckett. Allen Eakle acquired another of these properties.²⁹ The brick house remained in the family until the death of Wilson's widow, Susan, in 1907. The Bakersville Post Office closed before 1900 and mail service relocated to Grimes Station.

Bakersville did not so much decline as fail to flourish after the closing of the store and post office around which the village developed. The gable-front-and-wing dwelling at **17532** Bakersville Road was built about 1895. This was the last house built in the village until the 1960s. School consolidation programs of the 1920s resulted in the closing of the school. The early-20th century was a difficult time for small villages and cross road communities in general as the automobile allowed rural residents to travel to larger towns and cities for work and shopping.³⁰ Small scale manufactures such as the weavers and shoemakers listed in the 19th-century census records were unable to compete with the economies of scale realized by large factories. The combined effects of an agricultural depression in the 1920s, followed by the Great Depression of the 1930s and World War II effectively put an end to any remaining local businesses.

Demolition by neglect presents the greatest threat to Bakersville. Three of the survey district's six contributing resources are in fair but deteriorating condition. This includes the Elias Baker House which appears to have some significant structural brick problems on the front facade. Subdivision pressure is another concern. Modern construction has taken place on Fairplay Road, near the intersection with Bakersville Road. The roads immediately around Bakersville are narrow and have a limited carrying capacity and could not accommodate a major increase in traffic in their present condition, which limits the immediate potential for subdivision activity.

Resource History

The stone building at **17626** Bakersville Road was built in 1823 as the Bakersville community's second church and replaced a log church built about 1800. The name "Union Church" reflects the fact that it, like the earlier log building, was constructed by and for the areas Lutheran Evangelical, German Reformed and Methodist Episcopal populations. A new church was constructed in 1854 after which this building was used as a school until the 1920s.³¹ The building was used as a field hospital following the Battle of Antietam.³²

17626 Bakersville Road is also the address of the Salem Evangelical Lutheran Church, which was built in 1854. It too served as a field hospital after Antietam. The 300 person seating capacity is remarkable given the size of Bakersville and indicates worshippers traveled from the surrounding area to attend services. The front façade and Italianate brackets date to 1888 and were part of a \$1,000 remodeling program.³³

Current tax assessment records date the Elias Baker house at **17542** Bakersville Road to 1804, but this seems unlikely for several reasons. Foremost is the building's brick construction. Although several examples of brick architecture in Washington County survive from the 18th century, brick as a construction material did not come into general use here until the 19th century, with most examples dating from after 1820.³⁴ The house was probably constructed soon after Elias Baker, Sr. acquired the associated .08 acre lot of land from Daniel Rentch in 1827. Rentch conveyed the lot to Baker in a cashless transaction in exchange for an adjacent lot Baker purchased in 1817 for \$500. The brick house would have been worth substantially more than \$500 so this sale price indicates that it was not standing at the time of the sale.

The house has several notable features. First is the brick work. The dwelling's façade is laid up in Flemish bond which was going out of fashion in eastern urban areas by the first decades of the 19th century. Its use here is not surprising as building traditions often remained popular in rural areas after they had faded from fashion elsewhere.³⁵ Side walls, and those of the ell, are laid up in 4:1

Maryland Historical Trust

Maryland Inventory of Historic Properties Form

Inventory No. WA-II-276

Name
Continuation Sheet

Number 8 Page 5

common bond, which was less expensive and would have been perceived by the builder as less stylish. The rear ell is also interesting for its half-gable form, sometimes referred to as a flounder house, and for the presence of a two-story galleried porch.

The building, now used as a duplex, has three front doors, two of which are original as indicated by their side paneling. At first investigators interpreted the door configuration as signaling a *kreuzehaus*, which is an important 19th century transitional vernacular house type associated with builders of German extraction. The balanced façade created by two front doors is usually interpreted as a sign of German acculturation and a partial acceptance of dominant Anglo building preferences.³⁶

Upon closer inspection it appears that this is not the case. In a *kreuzehaus*, the doors are located immediately side by side, but here they are separated by an intermediate window. It appears that the two original doors are the result of a practical, rather than ethnic, consideration and reflects the building's dual use as a dwelling and a store. The door and frame of the third opening appear to date to the mid-20th century and related to the building's conversion at that time into a multi-family dwelling.

The two I-Houses at **17536** and **17532** Bakersville Road are located on land previously owned by Elias Baker, Sr. and were probably constructed in the early 1870s. They were not present in 1867 when Isaac Wilson purchased the land on which they stand, but buildings are shown in this location on the 1877 Lake, Griffing and Stevens Atlas. Dr. Richard Duckett is believed to have rented **17532** which was purchased by his daughter in 1897.

The gable-front-and-wing dwelling at **17524** Bakersville Road was probably built c. 1895 following its purchase by Georgiana Hoffman. Hoffman paid \$750 for the .68-acre parcel at an auction ordered by the Equity Court. The land was previously part of the estate of major land owner and farmer, John B. Eakle.³⁷

10. Geographical Data

Acreage of surveyed property 12.8 acres
Acreage of historical setting 12.8 acres
Quadrangle name Williamsport

Quadrangle scale: 1:24,000

Verbal boundary description and justification

The survey area begins at the Salem Evangelical Lutheran Church lot at 17626 Bakersville and terminates .25 miles west of that address at 17524 Bakersville Road. These two points mark the east and west boundary respectively. The district's north boundary is the rear (north) property line of survey district properties, while Bakersville Road represents district's southern terminus. It excludes modern houses built on Fairplay Road, near the intersection of Bakersville Road. Its area includes all buildings historically associated with the village of Bakersville.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Bakersville is a small community consisting of fewer than a dozen houses located along Bakersville Road between Keedysville and Williamsport and south of Fairplay in Washington County, Maryland. The buildings are located along the north side of the road, facing south.

Among the buildings, which are for the most part 19th century wooden and brick structures, is a one story three bay early 19th century stone structure formerly a school and church, but now used as a residence. At the east end of the village is the one story, four bay brick Salem Evangelical Lutheran Church which is dated 1854. It has a multisided steeple with a wood shingle roof rising from a square tower.
